

Kiplagat Griffins Kimutai

Information Technology Consultant

griffinskimutai@gmail.com | 0727727970 | Nairobi | <https://kiplagat.vercel.app/>

Professional Summary

Software engineer with four years of experience shipping systems that serve tens of thousands of users and generate significant recurring revenue. I specialize in taking unclear business requirements and delivering production-ready platforms that reduce cost, eliminate manual work, and scale without breaking. I have led technical direction for teams, owned full product lifecycles from concept to revenue, and consistently translate technical decisions into business outcomes that non-technical stakeholders understand and trust.

Experiences

Budget Ndio Story <https://budgetndiostory.org/> — Tech Lead 2025-Current

- Architected a scalable system that grew to over ten thousand monthly active users, demonstrating **system architecture and scalability** by designing a multi-tenant content framework that absorbed growth without requiring rebuilds.
- Applied **product engineering** to build an interface so intuitive that non-technical staff could publish complex interactive experiences without engineering support.
- Implemented **automation and operational efficiency** through automated testing and deployment pipelines, reducing release risk and accelerating feature delivery from concept to production.

Shifters - ECU & ADAS Vehicle Commerce — Agency Lead 2024 – 2026 Oman

- Delivered **system architecture and scalability** by building a secure commerce platform for sensitive digital products that generated approximately six thousand Omani Rial in monthly recurring revenue.
- Applied **data and team enablement** by owning the full product lifecycle from architecture to revenue **integrity and decision support** through robust validation, audit trails, and access controls that ensured transaction integrity and protected sensitive customer information.
- Demonstrated **technical leadership** e, with the platform maintaining ninety-nine point eight percent uptime and zero critical post-launch defects over twelve months.

Devops Technology Kenya — Software Engineer

July 2022- January 2023

Nairobi, Kenya

- **Spearheaded the end-to-end development of a comprehensive hospital management system**, co-architecting a full-stack platform that integrated critical operational modules.
- **Designed and implemented a modular microservices architecture**, creating independent, scalable services for distinct business functions that enabled parallel development, simplified maintenance, and allowed for targeted

- **Engineered and established automated CI/CD pipelines** using GitHub Actions and Docker, streamlining the deployment process to ensure consistent, reliable, and rapid releases across development and production environments..
- **Authored extensive technical documentation, API specifications, and system integration guides**, significantly improving cross-team collaboration and streamlining the onboarding process for new developers.

eKRAAL Innovation Hub — Open Source Intelligence Officer *June 2022 – September 2022*
Nairobi

- Applied **data integrity and decision support** by automating collection and analysis of large-scale datasets, reducing manual processing time by seventy percent and enabling analysts to review five times more information sources.
- Demonstrated **system architecture and scalability** by building secure internal tools with strict access controls and audit logging that met stringent confidentiality requirements.
- Delivered **product engineering and user experience** by designing intuitive interfaces for complex data workflows, ensuring secure tools remained usable under high-stakes operational pressure.

Education

The Cooperative University of Kenya — Bachelor of Science, Information Technology *2019–2023*

Academic Focus: Software Engineering, Database Systems, Algorithms & Data Structures, Distributed Systems

Extracurricular: Active participant in university hackathons and innovation challenges, consistently delivering scalable solutions addressing real-world problems.

Volunteering

Outline designs

2023-2024

- I designed a content architecture that allows non-technical studio staff to publish new projects, update case studies, and restructure portfolio categories without writing code or requesting engineering support.
- The system enforces visual consistency automatically, so every new project page adheres to the firm's brand standards and spatial narrative approach. This eliminated the previous bottleneck where marketing updates waited days for developer availability.

Stack

Frontend Development — ES6+, React.js, Typescript, Figma (UX/UI)

Backend & Data Science — Python, Node.js, Databases, API Integrations

DevOps & Systems — Docker, Git
